

1. List the names of two kinds of highly swollen and one kind of lightly/poorly swollen hydrogels and draw their structures.
2. What is a polyelectrolyte? Draw the chemical structures of PEI and poly(acrylic acid) (PAA).
3. What are the differences between thermoplastic and thermoset polymers?
4. How to prepare a PLGA? (this may need a web search)
5. What is LCST? What advantages do these polymers have? Draw the typical structure of PNIPAAm.
