

HW 4

[001] crystal zone: The outer circle

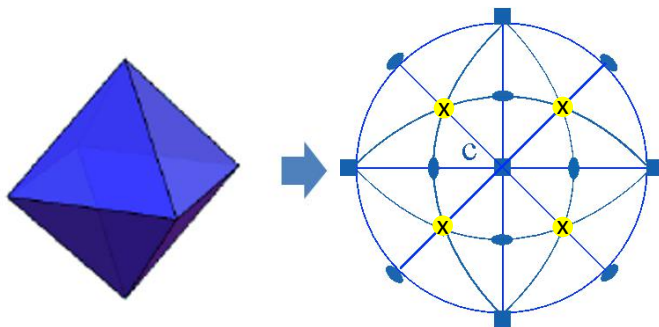

The projections of crystal surfaces of the same crystal zone distribute in a large circle.

Example: galena (方铅矿)

Projection of [001] crystal zone on the large circle of equator.

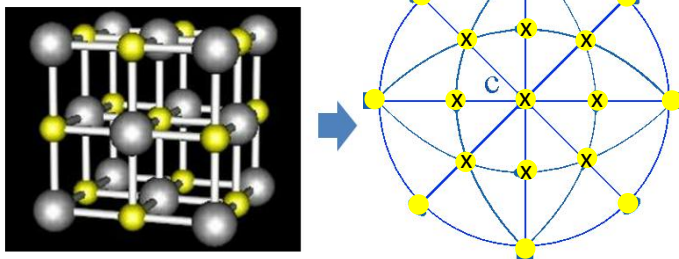

Octahedron

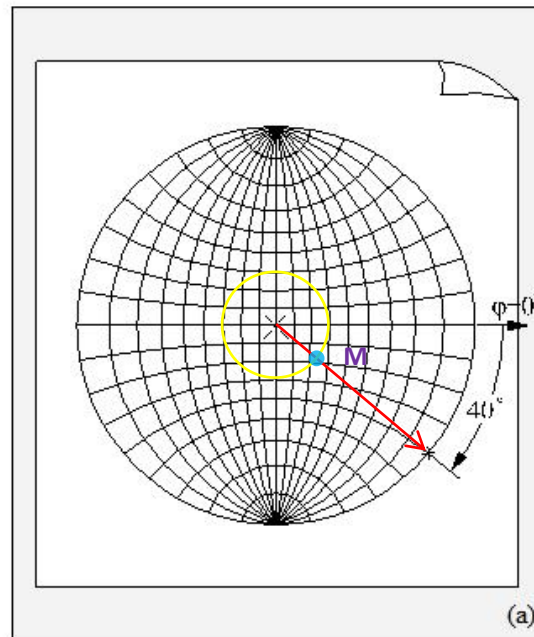

The projection of the pole point on upper hemispherical labeled as “ $\odot$ ”, those on the lower hemisphere poles labeled as “ $\times$ ”, overlap labeled as “ $\odot$ ”

Galena

Example I: Coordinates of M on crystal surface is $\rho=30^\circ$ and $\varphi = 40^\circ$. Make the stereographic projection of M.

Example II: give the interfacial angle between the crystal surfaces M (r_1, j_1) and P (r_2, j_2).
